

THE OEM SERVICE. NEAC Compressor Service COMPANY

Valve Service

New Element in OEM Service

Aim

- Reduction of maintenance expenses and machine down-time
- Increased reliability through qualified valve service with optimisation of wear parts

Need

Qualified Service Company One-Stop Shop

- Competent installation of spare and wear parts
- Existing network of selected suppliers to perform service

Workflow/Documentation of NEAC

Incoming Inspection:

- Inspection of disassembled valves with documentation available upon request

Valve Overhaul:

- Cleaning of components, mechanical refurbishment and parts replacement as necessary
- If necessary re-engineering of valve parameters as part of revision e.g. re-calculation and if necessary change of springs, valve lift and/or material

Final Inspection and Testing:

- Leakage test with gas or liquid depending on application with test certificate upon request

Advantages

- Standard OEM repair warranty for valves refurbished by NEAC
- Extensive experience and service-know-how as a result of large population of NEA and OEM licensed products
